

**LISTING OF CLAIMS:**

This listing of claims will replace all prior versions, and listing of claims in this application.

1. (Amended) A system for providing media content in a network comprising one or more servers configured to:

generate an interface at a site on said network, said interface having consistent graphical features and navigation capabilities [regardless of the content selected];

[collect] compile a plurality of media files for use with said interface;

associate metadata attributes with each of said plurality of media files; and

map certain of said metadata attributes to locations in said interface.

2. (Amended) The system of claim 1 wherein the plurality of media files is compiled from [are provided by] more than one source.

3. (Amended) The system of claim 1 wherein the one or more servers are further configured to generate a media player interface for experiencing the media content.

4. (Amended) A system for providing media content in a network comprising one or more servers configured to:

[define] associate metadata attributes with a plurality of media files; and

[use] utilize the metadata attributes to map the plurality of media files to an interface such that the interface is consistent for each of the plurality of media files.

5. (Original) The system of claim 4 further comprising:  
a local database for storing the metadata attributes.

6. (Amended) The system of claim 4 wherein the plurality of media files [are] is  
provided by more than one source.

7. (Amended) A method of providing media content to a plurality of [one or  
more] users over a network comprising:

compiling a data file that contains one or more sequentially placed unique identifiers which  
identify one or more media files; and

allowing the [one or more] plurality of users to access the one or more media files out of  
sequence.

8. (Original) The method of claim 7 wherein the data file is automatically  
compiled based on some criteria.

9. (Amended) The method of claim 8 wherein the data file is automatically  
compiled based on [some chosen] criteria chosen by one of the plurality of users.

10. (Original) The method of claim 7 wherein the data file is compiled  
manually.

11. (Original) The method of claim 7 wherein the one or more media files are  
provided by more than one source.

12. (Amended) A system for providing media content to [one or more] a  
plurality of users comprising one or more servers configured to:

compile a data file that contains one or more sequentially placed unique identifiers which identify one or more pieces of content; and

allow the [one or more] plurality of users to access the one or more media files out of sequence.

13. (Original) The system of claim 12 wherein the data file is automatically compiled.

14. (Amended) The system of claim 13 wherein the data file is automatically compiled based on [some chosen] criteria chosen by one of the plurality of users.

15. (Original) The system of claim 12 wherein the data file is compiled manually.

16. (Original) The system of claim 12 wherein the one or more media files are provided by more than one source.

17. (Amended) A computer readable medium comprising computer code for providing content to a user over a network, the computer code to configure one or more processors to:

compile a data file that contains one or more sequentially placed unique identifiers which identify one or more pieces of content; and

allow a user to access the one or more items of content within the data file out of sequence.

18.(New) The system of claim 3 wherein said media player interface is consistent regardless of the source of said plurality of media files.

19.(New) The system of claim 1 wherein the plurality of media files is compiled from more than one source.

20.(New) The system of claim 1 wherein said metadata attributes comprise a title for the media file.

21.(New) The system of claim 1 wherein said metadata attributes comprise a description for the media file.

22. (New) The system of claim 1 wherein said metadata attributes comprise a duration for the media file.

23. (New) The system of claim 1 wherein said metadata attributes comprise an expiration date for the media file.

24. (New) A method of providing media content in a network comprising the steps of:

generating an interface at a site on said network, said interface having consistent graphical features and navigation capabilities;

authenticating a user's authorization to access certain media content;

compiling a plurality of media files for use with said interface, wherein said plurality of media files comprises only the user's authorized media content;

associating metadata attributes with each of said plurality of media files, wherein the metadata attributes comprises a title for each media file; and

mapping certain of said metadata attributes to locations in said interface.
